modulators, fibroblast growth factor (FGF)1-10 modulators and/or platelet activating factor (PAF) antagonists. The method is useful for treating conditions leading to bone loss such as rheumatoid arthritis, multiple sclerosis, osteoporosis, osteomyelitis and asthma. The method is also useful for treating inflammation, systemic lupus erythematosus (SLE) and graft-versus-host disease (GVHD). Other diseases that can be treated include acute pancreatitis, Alzheimer's disease, anorexia, atherosclerosis, coronary conditions (e.g. myocardial infarction), anomer, diabetes, endometriosis, fever, glomerulonephritis, hyperalgesia, inflammatory bowel disease, ischaemia, pain, Parkinson's disease, promises and septic shock. This sequence is the human tumour necrosis factor inhibitor. The protein was used to make the truncated soluble tumour necrosis factor receptor (gTNFR) proteins of the invention. The truncated sTNFR proteins and tumour necrosis factor binding proteins (TNBP) are used to treat any TNF-mediated disease, e.g. arthritis, adult respiratory distress syndrome, cacheria/Anorexia/Anorexia/Anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexia/anorexi

an osteoprotegerin (OPG) dimerisation domain fused to a heterologous amino acid sequence. Also described are: (1) a multimer polypeptide comprising covalently associated Al monomers; (2) an isolated nucleic acid encoding Al; (3) an expression vector comprising the nucleic acid encoding Al; (3) an expression vector comprising the nucleic acid expression vector so that the nucleic acid is expressible. The products from the present invention are useful to treat a variety of disorders including those related to receptor binding. Compositions comprising tumour necrosis factor (TNF)/OPG and TNF receptor (TNF)/OPG chimeras are used to treat TNF and TNFF, mediated disorders such as inflammation, autoimmune diseases and disorders related to excessive apoptosis. The fused heterologous sequences to identify potential new receptors with fladds. The present sequence represents the TNF inhibitor 40 kDa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .,

The present sequence represents a N-terminal fragment of a mutant of the soluble tumour necrosis factor (TNF) receptor, where the wild the soluble tumour necrosis factor (TNF) receptor, where the wild cype to state the soluble tumour necrosis factor (TNF) receptor and ligand. These residues are also potential polyethylene glycol (PEG) conjugation sites. The wild type p75 TNF receptor protein was mutated and conjugated to PEG, using the method of the invention. The specification descries a method for conjugating proteins with PEG to result in PEG-conjugated proteins having little or no reduction in a desired activity. Specifically, one or more amino acid residues that are critical for protein bioactivity and which are capable of reacting with PEG sites are deleted, prior to conjugation of the protein to PEG. The methods provide PEG conjugated proteins that are more homogeneous and present in higher yields. Conjugation does not take place at amino acid residues that are are critical to the proteins bioactivity, thus maintaining the activity of the protein. The methods are used to produce PEG conjugated proteins.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                                                             tumour necrosis factor (TNE) receptor. The wild type Lys residues at positions 108 and 120 are replaced with Arg (see AAY5441-42). Lys120 and Lys108 make contact between the p75 receptor and ligand. These residues are also potential polyethylene glycol (PEG) conjugation sites. The wild type p75 TNF receptor protein was mutated and conjugated to PEG, using the method of the invention. The specification descries a method for conjugating proteins with PEG to result in PEG-conjugated proteins with PEG to result in PEG-conjugated proteins with PEG to result for cativity. Specifically, one or more amino acid residues that are activity. Specifically, one or more amino acid residues that are critical for protein bioactivity and which are capable of reacting with PEG sites are deleted, prior to conjugation of the protein to PEG. The methods provide PEG conjugation does not take place at amino acid residues that are are critical to the proteins bioactivity, thus maintaining the activity of the protein. The methods are used to produce PEG conjugated proteins. The methods are used to produce PEG conjugated proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               6

The present invention relates to Tumour Necrosis Factor (TNF) inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (see FAB37676 and AAB37665), which have TNF inhibitory activity. The novel TNF inhibitors of the present invention are useful as therapeutic agents for inhibiting the activity of TNF and interleukin (IL-1), and for treating inflammatory and degenerative diseases mediated by TNF. The present sequence is 40 Kba TNF inhibitor. The 40 Kba TNF inhibitor can inhibit both TNF alpha and beta (lymphotoxin).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel 30 kDa tumor necrosis factor inhibitor analog comprising a non-native cysteine residue cross-linked with polyethylene glycol, useful for treating inflammatory and degenerative diseases mediated by

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
        Numberosis factor receptor 1 precursor (validated) - human
Numberosis factor receptor 1 precursor (validated) - human
Numberosis factor receptor 1 preceptor; Nr Preceptor type 1
Nr Contains the mane service and a factor receptor; Two receptor type 1
Nr Contains the mane service and a factor receptor; Two receptor type 1
Nr Contains a factor receptor a phala inhibitor; tumor necrosis factor binding protein
Craccession: A38008, A3809; A34000, A36555; A380281; S12057, J70758; A60231; A38
R. Fuchs, P. : Strehl, S.; Dworzak, M.; Himmler, A.; Ambros, P. P.
A. Title: Structure of the human rwF receptor 1 (p60) gene (TNRF1) and localization to chancession: A38008, MUD:92250049
A. Notecule type: DNA

Nature 398:533-538(1999).

-! FUNCTION: FREEPTOR FOR TNF-ALPHA. HIGH AFFINITY FOR TNA-ALPHA AND APPROXIMATELY 5-FOLD LOWER AFFINITY FOR TNF-BETA.

-! SUBCELLULAR LOCATION: Type I membrane protein.

-! FTM: BHOSPHORYLATED; MAINLY ON SERINE RESIDUES WITH A VERY LOW LEVEL ON THREONINE RESIDUES the name Enbrel (Immunex and Wyeth-Ayerst). Used to treat moderate to servere rheumatoid arthritis (RA). Enbrel consist of the extracellular ligand-binding portion of TNFR2 linked to an Immuglobulin Fc chain. It binds to TNF-alpha and blocks its interactions with receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TUFF-CYS 1.

The role of polar interactions in the molecular recognition of CD40L
with its receptor CD40.";
Protein Sci. 7:1124-1135(1988).
I- FUNCTION: RECEPTOR FOR A CYTOKINE LICAND KNOWN AS CD40L.
I- SIMCLAGIN: RECEPTOR FOR A CYTOKINE LICAND FORCINOMAS.
I- TISSUE SPECIFICITY: B-CELLS AND IN PRIMARY CARCINOMAS.
I- SIMILARITY: CONTAINS 4 TWRR-CYS REPEATS.
I- DATABASE: NAME-PROW; NOTE-CD guide CD40 entry;

JESASE: DEFECTS IN TNFRSF11A ARE THE CAUSE OF FAMILIAL EXPANSILE OSTEGASE: DEFECTS (FEQ), A RARE AUTOSOMAL DOMINANT BONE DISORDER CHARACTERIZED BY FOCAL AREAS OF INCREASED BONE REMODELLING. THE STEDARCTERIZED BY FOCAL AREAS OF INCREASED BONE REMODELLING THE ADMILTHOOD. FEO IS OFTEN ASSOCIATED WITH EARLY ONSET DEAFHESS AND LOSS OF DENTITION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DISEASE: DEFECTS IN THERSFILA ARE A CAUSE OF FAMILIAL PAGET DISEASE DE BONE, ALSO KNOWN AS PAGET DISEASE OF BONE 2 (PDB2). IT AS A BONE REMODELLING DISCADER WHITH CLINICAL SIMILARITIES TO FEO. UNLIKE FEO, HOWEVER, AFFECTED INDIVIDUALS HAVE INVOLVEMENT OF THE AXIAL SKELETON WITH LESIONS IN THE SPINE, PELVIS AND SKULL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Galibert L.;
"A homologue of the TNF receptor and its ligand enhance T-cell growth
and dendritic-cell function.";
Nature 390:175-179(1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Υ.

SEQUENCE FROM N.A.

Zhang W., Wan T., Cao X.;

Submitted (MAY-1999) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: RECEPTOR FOR TURSF14. INVOLVED IN LYMPHOCYTE ACTIVATION.

PLAYS AN IMPORTANT ROLE IN HSV PATHOGENESIS BECAUSE IT ENHANCED

THE ENTRY OF SEVERAL WILDTYPE HSV STRAINS OF BOTH SEROTYPES INTO

CHO CELLS, AND MEDIATED HSV ENTRY INTO ACTIVATED HUMAN I CELLS.
                                                                           SUBCELLULAR LOCATION: Type I membrane protein (Probable).
TISSUE SPECIFICITY: WIDELY EXPRESSED, WITH THE HIGHEST EXPRESSION IN LUNG, SPLEEN, AND THYMUS.
SIMILARITY: CONTAINS 3 TNFR-CYS REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      127 AELKDEVGKGNNHCVPCKAGHFQNTSSPSARCQPHTRCENGGLVEAAPGTAQSDTTCKNP 186

-!- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD RECEPTOR: THE RESULTING AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE SUBSCOURT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEASES) MEDIATING APOPTOSIS. CONTRIBUTES TO THE INDUCTION OF NONCYTOCIDAL THE BEFREGIS INCLUDING ANTI-VIRAL STATE AND ACTIVATION OF THE ACID SPHINGOMYELINASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBDIVIT: THE BINDING TO THE EXTRACELLULAR DOMAIN OF THERI LEADS TO MOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERFACE SPECIFICALLY WITH THE DEATH DOMAIN OF TRAND. VARIOUS TRAND-INTERACTING PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FAND, ARE RECRUITED TO TRAIL COMMENS BY THEIR ASSOCIATION WITH TRAND. THIS COMPLEX ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND NF-KAPPA B SIGNALING.
                                                                                                                                                                                                                                                                                                                                                                            X-RAY CRYSTALLOGRAPHY (2.85 ANGSTROMS) OF 30-211 IN COMPLEX WITH TNFB MEDLINE-93258809; PubMed=8387891;

"Cloning of the cDNA encoding the porcine p55 tumor necrosis factor
receptor.";

Gene 163:263-266(1995).

-I- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD
RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
GEGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
RECRUITS CASPASE-8 PROTECLIVIC ACTIVATION WHICH INITIATES THE
SUBSEQUENT CASCADE OF CASPASES (ASPATATE-SPECIFIC CYSTEINE
RECRUITS CASPASE) PROTECLIVIC ACTIVATED WHICH INITIATES THE
SUBSULIT: TNF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFR1 LEADS TO
HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD. INTERACTING
WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD. INTERACTING
WITH THE DEATH AS TRAFS, RIP AND POSSIBLY FADD. THIS COMPLEX
ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
NP-KAPPA B SIGNALING (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: TYPE I membrane protein.

-I- SIMILARITY: CONTAINS 1 DEATH DOMAIN.
                                               01-OCT-1996 (Rel. 34, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
Tumor necrosis factor receptor 1 precursor (p60) (TNF-R1) (TNF-RI)
                                                                                                                                                 Chordata; Craniata; Vertebrata; Euteleostomi; Cetartiodactyla; Suina; Suidae; Sus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Procerty, frontable intrace.
